

Smart businesses looking to streamline IT operations are achieving results through managed desktop services. AbriaCloud Technologies' comprehensive approach to asset management reduces security concerns, disaster recovery and business continuity-based issues, while flattening spiraling maintenance costs. Our Desktop Management solution provides a comprehensive hardware and software inventory of user desktops and devices while ensuring operating systems are up-to-date with necessary application patches. Managing computing assets is easier as devices can be configured and managed remotely and securely.

Our Desktop Management Solution offers:

- Reduced costs associated with IT administrator management and support of company PCs
- Proactive management of disk space monitoring, anti-virus scanning, software updates and backups.
- Remote network monitoring and automated alerts
- Data recovery and imaging
- Improved PC performance and optimization
- Software license management and compliance reporting
- PC inventory management and reporting
- Break-fix repair of technical issues
- Proactive management of disk space monitoring, anti-virus scanning, software updates and computer backups.

AbriaCloud Technologies saves your company time and money by repairing technical issues in the background before major problems arise. We can set the Managed Desktop solution to automatically notify us if a problem is found, so the issue can be corrected before the user even knows it's there.

Contact AbriaCloud Technologies today at 678.264.6000 to find out how our Managed Desktop Solution can improve your organization's agility and reduce out-of-pocket costs and headaches associated with desktop hardware maintenance.
