

ABRIA™
SOFTWARE APPLICATION HOSTING (SAH)
AND SOFTWARE AS A SERVICE (SAAS)

AbriaCloud Technologies' Software as a Service (SaaS) and Software Application Hosting (SAH) solutions eliminate the headaches of maintaining and updating individual copies of software on multiple machines and different operating systems. Hosting software on a single platform enables user access to applications over the Internet from any device. Users can be added or removed quickly, repairs and updates are implemented uniformly across your organization, and new software can be deployed quickly. As your provider, AbriaCloud Technologies works with your organization to streamline application management and increase cost efficiency through keeping software programs up-to-date and functioning optimally.

Our SaaS/SAH service enables hosting of multiple software applications including email, office tools, accounting software, Customer Relationship Management (CRM) programs, Computer Assisted Design (CAD), Management Information Systems (MIS), Enterprise Resource Planning (ERP), inventory management, and many other programs required for today's business. AbriaCloud Technologies' customers benefit from SaaS/SAH through:

- Reduced cost of internal IT support
- Increased system-wide compatibility as all employees are on the same software version
- Improved collaboration and accessibility via Internet access
- Simultaneous multi-user access across applications
- Quick and easy software implementation
- Smoother overall system administration and interoperability

AbriaCloud Technologies provides ongoing support including updates, patches, installation and maintenance, while reducing the cost of your internal IT support and administration.

Contact us today at 678-264-6000 to explore the ways our Software Application Hosting and / or Software as a Service will benefit your business!
